

Esri GIS for Geodesy

Denitsa Savova-Georgieva (BG)

RESUME

ESRI is a global pioneer and leader with 50 years of experience in the development and implementation of Geographic Information Systems (GIS), which function as an integral part of almost every type of organization. ESRI GIS platform ArcGIS has been adopted as a GIS standard in a number of leading organizations, including NATO, the European Environment Agency, structures of the European Commission and others.

What is ArcGIS - a comprehensive platform for collecting, managing and analysing geospatial data. Whether you are an individual user, working in a team or part of a larger organization, ArcGIS will provide you with easy to use solutions for your goals and tasks, thanks to its flexibility. The platform is extremely integrated, which means that you can access and process your data from any type of device and all the information from the field teams collect to the finalized projects, you will find in a special, dedicated to you and your colleagues, virtually space in Esri's cloud.

ArcGIS provides a rich portfolio of specialized solutions in the field of geodesy, cadastre, spatial planning and more. for the needs of surveyors and engineers, both in the field and in the office.
